

AI-Powering Every Harvest

Your AI Farming Companion.

Plan. Plant. Prosper.

A complete AI ecosystem that empowers everyone to farm **smarter**, **earn more**, and build a sustainable future—one harvest at a time.

CORE MODES OF OPERATION

Self-Farming Mode

Provides customized, step-by-step AI-guided farming plans for individuals to grow crops at home for personal use or hobbies.

Marketplace Mode

A peer-to-peer (P2P) hub where users can post crop requests (demand) and accept farming/planning tasks (supply) to generate income.

Gamified Farming Experience

Transforms complex agricultural routines into interactive "Quests" with digital rewards to maintain long-term user engagement.

KEY AI-POWERED FEATURES

AI Plant Health Doctor

An image-based diagnostic tool (powered by Gemini 2.5 Flash) that identifies crop diseases from photos and provides step-by-step recovery timelines.

Precision RAG Marketplace

Uses Retrieval-Augmented Generation (RAG) to scan local plant databases and price indices, suggesting fair market prices and local alternatives for trading seeds and produce.

Grounded Planting Plans

Generates high-precision planting schedules (in Budget, Balanced, and Premium tiers) tailored to the user's specific budget and local weather/GPS data.

Care Calendar Sync

Acts as an autonomous agent that automatically pushes generated farming tasks and "Quests" directly to the user's Google Calendar.

FUNCTIONALITY & DEMO

- ✓ Personalized AI farming plans based on your budget, location & goals
- ✓ Instant plant health diagnosis from photos with recovery guidance
- ✓ P2P marketplace for crops, seeds & tasks with smart price suggestions
- ✓ Gamified quests & rewards to keep you motivated
- ✓ Sync tasks & reminders automatically to Google Calendar

FarmQuest

SDG ALIGNMENT

By increasing agricultural productivity and ensuring sustainable food production systems.

By integrating AI, RAG, and Drone technology into traditional farming.

Through precision farming that minimizes resource waste.
